

Don't Let Hazardous Waste Be A Hazard To You!

Use the clues to unscramble the letters and learn about hazardous waste!

Products with this label or symbol can eat through your skin, clothes and even metal. Examples include pool chemicals, oven cleaners, rug shampoo, rust remover, battery acid and bleach.

i v r o r s c e o

Products with this label or symbol can make you sick and even kill you if you swallow them or breathe the fumes. Another label for these products is "poison." Examples include rat poison, used motor oil, fertilizers, mothballs, weed killer and antifreeze.

o i t x c

Products with this label or symbol can ignite (catch on fire) very easily. Other labels for these products are "ignitable" and "combustible." Examples are paint thinner, turpentine, kerosene, rubber cement, nail polish remover, motor oil and gasoline.

m a f e b l m l a

Products with this label are unstable and can create a chemical change that may cause reactions to happen more quickly than usual. These products can explode or emit poisonous gases when mixed with other materials. A similar label for these products is "oxidizer." Examples include cyanides, bleach, pool chlorine and strong fertilizers.
