

Solid Waste Authority Palm Beach County

Inventory of Solid Waste Sites

2000

**SOLID WASTE AUTHORITY
OF
PALM BEACH COUNTY**

INVENTORY OF SOLID WASTE SITES

DISCLAIMER

This document is an attempt to inventory all known solid waste sites in Palm Beach County. The information contained in this report was obtained through investigation and research by the Solid Waste Authority staff and also contains information obtained from other governmental agencies.

No representation is made as to the completeness or accuracy of this index regarding the number of, location of, or contents of the sites referred to herein.

ACKNOWLEDGEMENTS

The Solid Waste Authority staff wishes to thank the Department of Environmental Protection, Palm Beach County Public Health Department, South Florida Water Management District, Palm Beach County Soil and Conservation District, Palm Beach County Mosquito Control, United States Geological Survey, Palm Beach County Department of Environmental Resource Management, Palm Beach County Historical Society, Florida Atlantic University Geography Department, the Lake Worth Historical Society and the Delray Beach Historical Society. Additionally, staff wishes to thank various private consulting firms and private individuals who have provided information used in this index.

Editor's Note:

The 2000 edition of the *Inventory of Palm Beach County Solid Waste Sites* contains a total of 189 sites, an increase of 15 sites from the 1996 edition.

Introduction

This Index is a compilation of information obtained from numerous sources concerning the location and disposition of solid waste sites located in Palm Beach County. In this index a solid waste site is defined as any parcel of land upon which or in which solid waste has either been processed, transferred, or placed for disposal. These sites include dumps, landfills, solid waste management facilities, waste transfer stations, selected hazardous waste spill or burial sites, and wastewater sludge land application sites.

The information and map included in this index should not be construed to represent a final or definitive evaluation for any site identified.

The inclusion of a location in this index indicates that available information leads to a conclusion that at one time the referenced site was used for the storage, processing, transfer, or disposal of solid waste.

This study has not investigated every parcel of land in a Palm Beach County. Therefore, the absence of a solid waste site on a particular parcel of land may only mean that no information was available in the records examined to indicate the presence of a solid waste related activity.

If there are concerns as to whether or not a solid waste activity has taken place on a particular piece of property, it is highly recommended that a qualified environmental professional be retained to conduct a thorough on-site investigation of the property in question.

Methodology

A database was developed that allowed for continual updating of information during the investigation of solid waste sites. Sites were named and numbered. Data, including history, groundwater analysis, capacity, location etc. was incorporated into the database.

Identification of the sites included in this index involved a search for available records of the Palm Beach County Public Health Unit, Southeast District of the Florida Department of Environmental Protection, newspaper archives, historical societies, and interviews with past and present workers in the field of public works, public health, solid waste, mosquito control, and environmental consulting. In addition to written information, the locations of many dump and landfill sites were determined through interpretation of aerial photographs. The aerial photographs of Palm Beach County (1940-1990) were obtained from the U.S. Department of Agriculture, Palm Beach County Soil and Conservation District, Palm Beach County Tax Assessor, Redi-Maps, and the National Oceanic and Atmospheric Administration. Field investigations were also utilized to determine site locations.

Visible characteristics used to identify these waste disposal sites from aerial photographs include:

- * A road that leads from a major roadway and seemingly goes nowhere.
- * A parcel of land denuded or having a much younger growth of vegetation than the surrounding area.
- * Trenches, pits, ponds, or lakes that have been filled in over a period of time.
- * A parcel of land in a densely developed area left undeveloped.
- * A parcel of land significantly higher in elevation than the surrounding area.
- * A significant growth of castor bean plants or other exotic vegetation (which are indicative of prior soil disruption).

The trench and fill method of waste disposal commonly used in these earlier waste sites limit the use of topographic features in determining the location of most early waste disposal sites.

Historical Trends

During the compilation of this index certain historical trends were noted as to the location of solid waste sites in Palm Beach County. These trends can be generally delineated as follows:

- * From the 1920's to the 1950's dumps and landfills tended to be located just west of the population centers of the coastal cities, in the sandy coastal ridge about a mile inland from the intracoastal waterway, along a north-south line paralleling Interstate I-95.
- * As the population grew and moved westward, so too did the waste disposal sites; into the pine flatwood and wet prairie areas along both sides and paralleling the Florida Turnpike. Areas mined for shellrock were occasionally used as fill sites for Palm Beach County's trash and garbage.
- * Several communities used trash to fill in submerged or mosquito infested wetlands.
- * It was a common practice for military bases to landfill their wastes within the perimeter of the base, possibly for security reasons during the war years.
- * Sludge disposal sites are located primarily in the agricultural areas west of Military Trail (SR 809) and bordering US 441 (SR 7) in Palm Beach County.

Site Positioning

A Global Positioning System (GPS) receiver was used to obtain precise and accurate ground locations for the sites and a Geographic Information System (GIS) computer program was utilized to process the information.

GPS technology is based upon the principle of triangulation and satellite ranging, where a precise position can be determined based upon known distances to navigation satellites in earth orbit. The U.S. Government maintains a network of these satellites specifically for this purpose. The GPS receiver used can track up to six satellites simultaneously for point location data accurate within 300 to 1000 feet.

A Geographic Information System is an organized collection of computer hardware, software, and geographic data designed to efficiently capture, store, update, manipulate, analyze, and display all forms of geographically or spatially referenced information. A GIS takes locational data such as points on a coordinate system and creates a spacial relationship between map features. Attribute data is stored as characteristics associated with the locational entities in a relational database.

The Geographic Information System used is ArcView, version 3.2a, a software package developed by the Environmental Systems Research Institute (ESRI). The computer hardware used was a Pentium II personal computer with adequate RAM and hard disk memory to run the software.

The site locations were pinpointed using the GPS and inputted into the GIS. The sites were projected onto the Florida State Plane East map projection referenced to the North American Datum of 1983. The Solid Waste Authority maintains the database that is joined to the GIS in Dbase IV format.

All information about the Palm Beach County Solid Waste Sites exists in both digital and hard-copy form. The map coverage and the database exist as an ArcView shapefile.

Supplemental Information

The Solid Waste Authority maintains files for the individual sites and has additional information, including ground water data for many of the sites listed in this index. This information can be obtained for an individual site by written request to:

Solid Waste Authority

SOLID WASTE CLASS CODES

DISPOSAL FACILITIES

100	Class I Landfill
200	Class II Landfill
300	Class III Landfill
	310 Trash/Yard Trash
	320 Trash Composting
400	Sludge Disposal Facility
	410 Grade I Sludge
	420 Grade II Sludge
	430 Grade III Sludge
500	Other Disposal Facility
	510 Special Waste
	511 Waste Tire Disposal
	520 Old dump
	530 Lack of Data
	540 Construction/Demolition Debris
	590 Unauthorized Dump
	591 C & D Debris, Unauthorized

VOLUME REDUCTION/RESOURCE RECOVERY FACILITIES

600	Thermal Treatment Facility
	610 Incineration
	611 Incineration only
	612 Waterfall Incineration
	613 Waste Tire Incineration
	620 Pyrolysis
700	Volume Reduction/Transfer Station
	710 Baler/Compactor
	720 Shredder/Pulverizer
	721 Waste Tire/Shredding
730	Sludge Concentration
740	Composting Plant
	741 Sludge Composting
	742 Yard Trash only Composting
	743 Manure Composting
	749 Other Composting
750	Transfer Station
	751 Waste Tire collection center
	752 Used oil Collection Center
	753 Biohazardous waste Storage
800	Resource Recovery Facility
810	Material Recovery
	811 Used oil Recycling
	812 Container Recycling
820	Energy Recovery
	821 Biomass Gas Production
900	Other Volume Reduction/Resource Recovery Facility

FLORIDA LANDFILL INDEX SYSTEM

Palm Beach County Solid Waste Sites (numeric table of contents)

<u>Site #</u>	<u>Site Name</u>
PB 001	Jupiter Garbage and Trash Dump
PB 002	Salhaven Private Dump
PB 003	Pratt and Whitney Site
PB 004	Juno Beach Dump
PB 005	Lake Park City Trash Dump
PB 006	West Lake Park Road County Dump
